RDAP / WHOIS
Registry and partner integrations

About Me

I manage a personal investment portfolio of 100+ domain names. I am also learning Arabic and enjoy travelling, working out, martial arts, sport shooting and training dogs.

Profile

I am a software engineer with 4+ years of experience building and maintaining frontend and backend systems at Dynadot, a global domain registrar managing 13M+ domains. My work spans registry integrations, pricing and order processing. I have built features for customers and administrators, including dashboards that track platform usage, monitor daily operations and help investigate production incidents.

After my promotion in 2024, I joined the API team. I built public API features and integrated partner platforms, helping the team grow the reseller program from zero to 800,000+ domains registered and monitored.

Employment History

Dynadot | Software Engineer

Jul 2022 – Present · Remote from Serbia
Global domain registrar | 13M+ domains under management

- Built and maintained Java production systems serving hundreds of thousands of customers worldwide. My work spanned the domain lifecycle, customer accounts, administrative tools and services shared across the platform.
- Built background processes using Redis, wrote SQL reports for operations teams and contributed to features for monitoring production incidents.

Promoted in 2024 | **Medior Software Engineer | API Team**
Built reseller systems and contributed to partner meetings and agreements.

- Built and maintained core Dynadot public API features for domain registration and management, supported Wix, WHMCS, Twilio and Slack integrations, and updated account workflows, internal tools and developer documentation.
- Worked with engineering, support and business teams in the US and China to investigate production issues and deliver new features. This included travelling to meetings in several Asian countries.
- Conducted HR and technical interviews for engineering candidates.

Vega IT | Software Engineer

May 2022 – Jul 2022

- Built REST APIs with Spring Boot and responsive web interfaces with React.

Selected Projects

ClayResults.online | Co-creator & Software Engineer

Major shooting ranges in Serbia and clubs abroad use our platform to register competitors, keep score and publish results.

MyTripSeeker | Founder & Software Engineer

Developing a travel platform for flights, accommodation, tours, guides and experiences using Spring Boot, React and MySQL.
